I can contain very high pressure.
I wear a label to identify the gas I am holding.
My color does not tell you what gas I contain.
I am only one piece of a two-part system. Without a correct regulator or manifold I cannot function safely.

Know how to safely install and remove me from your system.
Make sure I am properly secured when in use and when stored.
Open my valve slowly when I am to be used.
Close my valve when you are done.
Know the dangers of my contents, read the MSDS, and follow proper procedures when using me.

If my valve or regulator snaps off, all my power is unleashed through an opening no larger than a pencil.
I will jet away faster than any dragster.
I will smash through brick walls.
I will spin, ricochet, crash and splash through anything in my path.

Secure me, Cap me, and Always follow recommended safety procedures.
